TO THOSE INTERESTED IN NEW MEXICO AGRICULTURE:

This 1992 issue of New Mexico Agricultural Statistics tells the story of how diverse and productive agriculture is in New Mexico. Agriculture continues to play a vital role in the state's economy, generating over \$1.5 billion in cash receipts from marketings.

With each passing day agricultural producers, processors and affiliated industries face more challenges as they strive to make a profit in the food and fiber sector of today's economy. Accurate and reliable information is essential as management decisions are developed for the future. The data contained in this publication is used to make those decisions as well as being a reference guide to researchers, educators, media, state and federal officials, and policy makers who depend on sound data.

The New Mexico Department of Agriculture in cooperation with the New Mexico Agricultural Statistics Service, U.S.D.A., continues to upgrade the quality of this publication each year. But the quality of this data would not be possible without the cooperation of the producers throughout the state who take time out of their busy schedules to provide the information necessary to develop these statistics. A special thanks goes out to them as well as the other state and federal agencies in New Mexico who lend a helping hand.

Sincerely,

Frank A. DuBois
Director/Secretary

NEW MEXICO AGRICULTURAL STATISTICS SERVICE

UNITED STATES DEPARTMENT OF AGRICULTURE • NATIONAL AGRICULTURAL STATISTICS SERVICE

ACKNOWLEDGEMENT

This edition of the New Mexico Agricultural Statistics is the thirty-second annual bulletin published as a cooperative effort between the New Mexico Agricultural Statistics Services, U.S.D.A. and the New Mexico Department of Agriculture.

New Mexico's agricultural producers are the primary contributors to the statistical data found in this bulletin. Their high response rate to the many surveys conducted throughout the year is closely tied to the accuracy of the data. A very special thank you must be given to all who voluntarily responded.

I must also thank those individuals who participated in their annual county statistical meetings. Their assistance is very instrumental in establishing the county estimates found in this bulletin.

And, lastly, I thank the office and field staff of the New Mexico Agricultural Statistics Service and the New Mexico Department of Agriculture for their dedication to provide accurate, timely, and unbiased statistical data for New Mexico.

Charles Gore

Charles Gore
State Statistician

NEW MEXICO COUNTIES

Farm Numbers and Land in Farms

Year	Number of Farms in Operation	Land in all Farms ^{1/}	Number of Cattle Ranches	Number of Milk Cow Farms ^{2/}	Number of Sheep Ranches	Number of Hog Farms
	1,000 Farms	Million Acres	-----Number ^{3/} -----			
1983	14.0	46.0	9,000	1,500	1,600	1,500
1984	14.0	45.8	9,000	1,400	1,600	1,300
1985	14.0	45.0	9,000	1,400	1,500	1,200
1986	14.0	44.6	9,000	1,300	1,500	1,200
1987	14.0	44.6	9,000	1,200	1,400	1,100

PRICES AND INCOME

ASSETS AND DEBTS: New Mexico farm and ranch assets totaled \$13,037.2 million for the year ending December 31, 1991. This level represents a 3.3 percent increase in assets from one year earlier, and an 18.9 percent increase in assets since 1989. Real estate accounted for 81.9 percent of all assets, compared to 82.4 percent a year earlier. Farm and ranch debt in New Mexico totaled \$1,096 million during the year ending December 31, 1991, 2.7 percent higher than debt in 1990, and 2.9 percent higher than two years earlier. Real estate debt accounted for 52.6 percent of total debt, compared to 55.9 percent one year earlier.

CASH RECEIPTS: The 1992 cash receipts from farm marketings in New Mexico totaled \$1,536.2 million, up 5.5 percent from cash receipts in 1991. Livestock and livestock products accounted for 67.7 percent of the total and were valued at \$1,040.1 million. Crops, valued at \$496.1 million, represented 32.3 percent of cash receipts. Cattle and calves continued to dominate all other commodities, accounting for 47.2 percent of all cash receipts. Wholesale milk was second with 16.8 percent, while hay remained third with 6.8 percent of the total. The chile industry ranked fourth, accounting for 4.4 percent of total cash receipts, while pecans ranked fifth with 3.2 percent of the total.

FARM INCOME CONCEPTS: Cash receipts from farm marketings represent gross income from the sales of crops, livestock, and poultry during the calendar year. The value of home consumption of farm products, inter-farm sales of livestock, and crops fed on farms where grown are not included in cash receipts. Production expenses such as feed, fuel, and fertilizer, and estimates of cash receipts reflect farm productivity of the county to which the income is assigned. Cash receipts from marketings of crops is the final product of several estimates: acreage, yield, percentage of total production sold, average price, and changes in inventories. Marketings of livestock and poultry include the sale value of an animal only once, usually at the time when the animal is sold for slaughter or at final disposition.

Gross farm income includes four principal components: cash receipts from farm marketings, government payments, other farm income, and non-money income. Cash receipts represent gross receipts from commercial markets sales as well as loans made or guaranteed by the Commodity Credit Corporation (CCC) and other purchases under price support programs. Government payments to farmers are those payments made directly to farm producers in connection with farm programs. Other farm income is cash income from such sources as recreation, machine hire, and custom work. Non-money income includes the rental value of housing provided by farm dwellings and the value of farm products consumed directly in farm households.

Farm production expenses include current farm operating expenses for such items as wages paid to hired farm workers, outlays for repairs of farm equipment and operation of the farm, as well as purchases of oil, feed, and livestock.

Overhead-type costs include charges for depreciation and other capital consumption, taxes on farm property, and interest. Net change in farm inventories is the estimated physical change in livestock and crops owned by farmers, valued at average prices prevailing during the year.

1/ Details may not add to totals due to rounding; 1987 to 1990 have been revised, 1991 preliminary.

2/ Beginning with 1978, other farm income includes forest product sales. Prior to that year, forest product sales were included in the cash receipts from farm marketings category.

3/ Beginning with 1975, based on the 1974 Census of Agriculture definition, a farm is an operation with sales of \$1,000 or more.

INCOME AND PRODUCTION EXPENSES

I **NCOME:** Gross income on New Mexico farms and ranches for 1991 was \$1.65 billion, an increase of .9 percent from 1990 and 2.0 percent above 1989. Cash receipts from farm and ranch marketings were \$1.50 billion, up 1.2 percent from 1990. The other items contributing to gross income were: government payments at \$58.4 million, non-money income at \$48.4 million, and other farm income at \$37.5 million. Cash receipts from marketings represented 91 percent of total gross farm income for 1991. Net farm income before inventory adjustment, the difference between gross income and production expenses, at \$320.6 million, was down 10.0 percent from 1990. Total net farm income, which is income after adjustment for inventory change, at \$352.8 million, was up 6.5 percent from 1990.

P **RODUCTION EXPENSES:** Farms and ranches in New Mexico had \$1.32 billion in expenses for producing their crops and livestock in 1991, an increase of 4.0 percent from 1990. This was the seventh straight year since 1984 that cash receipts from farm marketings exceeded production expenses.

LIVESTOCK

RANGE AND PASTURE FEED: Due to above normal precipitation during the winter months, pasture forage had an excellent growth start as greening began. From the first of April until the end of September, soil moisture supplies were mostly adequate throughout the state. During this time, pasture feed conditions were consistently rated as good to excellent. After October 1, declining average precipitation caused the available pasture forage to decline throughout the remainder of the year.

CATTLE AND CALVES: The January 1, 1993 estimate of all cattle and calves in New Mexico was 1.37 million, a decrease of 2 percent from last year's estimate of 1.40 million. Beef cow inventory was estimated at 557,000, an increase of 3 percent from last year's estimate of 539,000 head. Ranchers maintained 105,000 heifers for beef cow replacement, up 17 percent from 90,000 in 1992. The number of milk cows in New Mexico grew to a record 123,000 head, an increase of 22 percent. Dairy heifers kept for replacement increased 18 percent from 22,000 to 26,000. Steer inventory decreased 22 percent from last year's estimate, with an estimated 190,000 on hand, down from 244,000 on hand in 1992. Bulls on hand increased 8 percent, estimated at 40,000. The 1992 calf crop, including both beef and dairy calves, was estimated to be 560,000, up 17 percent from the 1991 estimate of 480,000. Calves on hand January 1, 1993 totaled 260,000 compared to 290,000 on hand January 1, 1992. Cattle and calves on full feed for slaughter on January 1, 1993 were estimated at 130,000 an increase of 8 percent over last year's 120,000. New Mexico Livestock Board records indicated the total cattle shipped into New Mexico was 851,964 up 30 percent from last year's 656,683. Texas accounted for 40 percent of the total with 343,548 head shipped; Arizona, 36,533; Mississippi, 35,266; Colorado, 30,467; Oklahoma, 24,637; and Alabama, 24,287. Total cattle shipped out of New Mexico was 1,230,802 head, up 11 percent from last year's 1,108,275. Texas accounted for 65 percent of the total with 796,202; Colorado, 190,681; Kansas, 117,160; Oklahoma, 60,515; and 27,971 were shipped to Arizona.

SHEEP AND LAMBS: The state inventory of all sheep and lambs on January 1, 1993 was estimated to be 405,000 head, down from the 1992 estimate of 445,000. Sheep and lambs on feed for slaughter was down 43 percent from 1992, decreasing from 35,000 to 20,000 head. The estimated number of stock sheep on hand was 385,000, a decrease of 6 percent from the previous year's estimate of 410,000. Wool production totaled 3,835,000 pounds for 1992, shorn from 410,000 head. This was a decrease of 7 percent from 1991's production of 4,130,000 pounds from 427,000 head.

HOGS AND PIGS: The estimate of total hogs and pigs on hand as of December 1, 1992 in New Mexico was 23,000 head, 4 percent below the previous year's estimate of 24,000. Breeding inventory remained at 4,000 head while the market hog inventory dropped 1,000 head to 19,000.

CHICKENS: The total number of chickens on hand as of December 1, 1992 was 1.375 million head. New Mexico total egg production for the December 1, 1991 to November 30, 1992 reporting year was 303 million. The average number of hens and pullets of laying age was 1.187 million head, up 2 percent from 1991.

Value of Egg Production
New Mexico, 1983-1992

FIELD CROPS

WHEAT: Abundant winter moisture across the state was followed by damaging high winds and hail throughout the eastern part of the state in June. Harvested acres were up 3 percent to 330,000 acres. Despite some weather losses, growers still averaged 34 bushels per acre, a 9 bushel increase from 1991 and the highest since 1985. As a result, grain production rose 40 percent to 11,220,000 bushels.

ALFALFA: Total acres harvested for alfalfa hay in New Mexico decreased 4 percent to 250,000 acres in 1992. Yield increased 4 percent to 5.1 tons per acre. Total production increased slightly from 1991 to 1,275,000 tons in 1992.

SORGHUM: Plantings rebounded to 215,000 acres as a result of adequate soil moisture and hailed out cotton acreage replanted to sorghum. Acreage harvested for grain rose 21 percent to 205,000 acres compared to 170,000 acres for 1991. The average yield remained at 60 bushels per acre, unchanged from the previous year. Total grain production of 12,300,000 bushels for 1992 was a 21 percent increase from 1991. Sorghum for silage production decreased 67 percent to 16,000 tons.

CORN: Corn seedings increased 14 percent to 105,000 acres in 1992. Acreage harvested for grain increased by 18 percent from 1991. Producers averaged 160 bushels per acre, and grain production totaled 11,360,000 bushels, up 15 percent from 1991. Corn for silage production decreased 12 percent to 608,000 tons compared to 690,000 tons for 1991.

COTTON: Upland cotton seedings decreased 20 percent to 55,000 planted acres. Harvested acreage was reduced 43 percent to 37,000 acres, partly as a result of early June hail losses. The remaining cotton had a yield of 616 pounds per acre, compared with 465 pounds per acre in 1991. Total production decreased by 25 percent from 1991 to 47,500 bales. American-Pima plantings totaled 13,000 acres, of which 12,800 acres were harvested, both down 34 percent from 1991. Because of a record yield, up 56 percent to 739 pounds per acre, production increased 3 percent to 19,700 bales.

PEANUTS: New Mexico continued to increase its peanut production despite planting and harvesting fewer acres in 1992. Planted and harvested acres were both 21,100, down 7 percent in 1992. Yield increased 23 percent in 1992, to a record setting 2,760 pounds per acre. The result was total production increasing 14 percent to 58,236,000 pounds.

	1992	Tons	70.0	1.80	126	76.50	9,639

^{1/} Production in cwt., season average price in dollars per cwt.

^{2/} 480 pound net weight bales.

^{3/} Estimates comprised of quota and non-quota peanuts.

^{4/} An 8:1 ratio was used to convert green tonnage to a dry weight equivalent.

^{5/} Parts will not sum to total due to price rounding.

Fruits, Nuts and Vegetables

Apples: Production, Price and Value

APPLES: For the state as a whole, weather in 1992 was much more suitable for apple production than the previous several years. In 1992, New Mexico apple producers had their best production year since 1981. Apple growers produced 15.0 million pounds of the fruit in 1992, an increase of 12.7 million pounds over the 1991 level. The price received by apple producers averaged 16.9 cents per pound or \$6.76 per bushel. This compares with \$9.04 per bushel received for the 1991 apple crop. Value of the 1992 crop increased to \$2,535,000.

New Mexico Pecan Production

Total In-Shell Production, 1983-1992

Pecans: Production, Price and Value

Crop Year	Production (in shell)	Price Per Pound	Value of Production
	1,000 Pounds	Dollars	1,000 Dollars
1983	29,000	.73	21,170
1984	24,000	.83	19,920
1985	29,000	.88	25,520
1986	27,000	.91	24,570
1987	25,000	.65	16,250
1988	26,000	.67	17,420
1989	29,000	1.03	29,870
1990	34,000	1.53	52,020
1991	29,000	1.48	42,920
1992	30,000	1.64	49,200

NEW MEXICO's PECAN production was estimated at 30 million pounds in shell basis, one million pounds over last year's crop. The 1992 production is the second highest on record topped only by the 34 million pounds produced in 1990. Production was affected in some orchards by isolated hail damage and some pollination problems caused by a wetter than normal spring.

Prices received by growers for the 1992 crop set a new record high, averaging \$1.64 per pound, in shell. This was 11 percent higher than the previous year and 7 percent above 1990. The value of production was estimated at \$49.2 million, nearly 15 percent higher than the value of the 1991 crop.

New Mexico Lettuce Acreage, 1983-1992 Spring, Fall and Total Acres Harvested

LETTUCE, a cool season crop, is produced in New Mexico in the spring and fall. Spring lettuce production for 1992 was 476,000 hundredweight, nearly 1.8 times the previous year's level, while fall production totaled 378,000 hundredweight, 8 percent over the production level of 1991. The average spring price in 1991 was \$9.50 per hundredweight with a fall price of \$11.10. The combined spring and fall value was \$8.7 million, 28 percent under the value of the 1991 spring and fall crops.

The major varieties of commercially grown **NEW MEXICO ONIONS** include Grano, Granex, Sweet Spanish and Mid-Summer hybrids. Most of the onions produced in New Mexico are non-storage types, although some acreage in the state is devoted to the production of storage onions. Harvest usually begins in late May and continues through September. New Mexico onion production in 1992 was 3,200,000 hundredweight, up 10 percent from the previous year's production of 2,911,000 hundredweight. The total value of production was \$38.1 million. The majority of the acreage devoted to onion production was located in Dona Ana and Luna counties. These counties accounted for 90 percent of the harvested acreage.

New Mexico Chile Acreage Harvested Acres, 1983-1992

Harvested acres of *CHILE* set a new record high at 34,500 acres in 1992, up 16 percent from the previous year's record of 29,700 acres. Production also reached an all time high of 53,475 dry equivalent tons, up 15 percent from the 1991 crop. The increased acreage and production pushed the value of the crop to a record level of \$67.4 million. Prices paid to farmers were down slightly to \$1,260 per dry ton. Average yield per acre decreased in 1992 to 1.55 dry equivalent tons per acre, the lowest since 1985 with the same yield. A combination of weather, disease, insects and market conditions attributed to the decreased yields in 1992.
